FOR IMMEDIATE RELEASE

BG PRODUCTS, INC., INTRODUCES SPECIALTY DUAL CLUTCH TRANSMISSION FLUID

WICHITA, Kan.—July 15, 2014—BG Products, Inc., introduces a new transmission fluid specifically designed for wet dual clutch transmissions (DCT).

DCTs combine elements of both automatic and manual transmissions and require a fluid that can sufficiently protect the complex moving parts. An effective DCT fluid must contain a friction modifier and anti-wear chemistry for automatic components plus extreme pressure chemistry for the manual side.

BG Universal Synthetic DCT Fluid, PN 319, can withstand high heat, constant friction and mechanical shearing, which are inherent in DCTs.

BG Universal Synthetic DCT Fluid optimizes DCT performance with:

- Excellent anti-wear protection
- Superior performance in low temperature conditions
- Extraordinary temperature protection
- Resists foaming
- Outstanding fluid life
- Extended corrosion inhibition
- High shear stability

BG Universal Synthetic DCT Fluid is essential for wet dual clutch transmissions and direct shift gearboxes.

BG Products, Inc., is dedicated to making vehicles last longer and perform better. In partnership with an international network of distributors, BG serves the driving public with innovative products and proven programs for automotive and fleet maintenance.

In a national survey, Service Managers chose BG products three to one over any other.
